Python List Programs - Questions and Answers

1. Create a list of 5 student names and print each name using a loop.

```
name=['Anu','Allen','Nitha','Neena','Divya']
for i in name:
   print(i)
```

2. Create a list of 5 numbers and find the sum of all elements.

```
num=[20,30,60,10,40]
sum=0
for i in num:
   sum+=i
print("sum= ",sum)
```

3. Create a list of fruits and print the total number of fruits in the list.

```
fruit = ['Apple', 'Grapes', 'Orange', 'Pineapple', 'Pear']
count = 0
for i in fruit:
   count += 1
print("Total number of fruits:", count)
```

4. Take a number from the user and check whether it exists in a list of numbers.

```
n=int(input("Enter a number "))
numbers=[45,89,90,23,36]
if n in numbers:
   print("Number exists")
else:
   print("not exists")
```

5. Create a list of colors and add a new color entered by the user. Print the updated list.

```
colors=['yellow','blue','green','white']
new_color = input("Enter a color: ")
colors.append(new_color)
print("Updated list:", colors)
```

6. Create a list of subjects and remove a subject entered by the user. Print the updated list.

```
subjects = ['Maths', 'Science', 'English', 'History', 'Computer']
sub = input("Enter a subject to remove: ")
if sub in subjects:
   subjects.remove(sub)
   print("Updated list:", subjects)
else:
   print("Subject not found")
```

7. Create a list of numbers and find the largest number without using max().

```
numbers = [45, 12, 78, 23, 90, 56]
largest = numbers[0]
for i in numbers:
   if i > largest:
      largest = i
print("Largest number:", largest)
```

8. Create a list of numbers and count how many even and odd numbers are present.

```
num_list = [10, 15, 22, 33, 40, 57, 68]
even_count = 0
odd_count = 0
for i in num_list:
   if i % 2 == 0:
      even_count += 1
   else:
      odd_count += 1
print("Even numbers:", even_count)
print("Odd numbers:", odd_count)
```

9. Create a list of city names and print the list in reverse order without using reverse().

```
cities = ['Delhi', 'Mumbai', 'Chennai', 'Kochi', 'Bangalore']
for i in range(len(cities)-1, -1, -1):
   print(cities[i])
```

10. Create a list of marks and calculate the average mark of all students.

```
marks=[85,92,76,6,75]
total=0
mark_count=0
```

```
for i in marks:
    total+=i
    mark_count+=1
average=total/mark_count
print("Average mark:", average)
```
