Python Set Programs - Questions and Answers

1. Create a set and perform basic set operations.

```
a = {10,20,30,50,70}
print(a)

a.add(89)
print("after adding", a)

a.update([94, 100])
print("After updating")
print(a)

a.remove(100)
print("after removing", a)

a.discard(10)
print("after discarding:", a)

a.clear()
```

2. Create two sets and find their union.

```
set1 = {34,56,78,92,10}
set2 = {56,78,90,10,101}

print(set1.union(set2))
```
